Professional Summary:

Entry-level web developer, with a focus in web design, utilizing JavaScript, HTML5, CSS and JSON to build single-page applications, seeking employment in the Information Technology field.

Technical Skills:

JavaScript, HTML5, CSS3, JSON

Continued Learning:

SavvyCoders Cohort 2020 - A 12-week accelerated course designed to educate in executing web-based projects. This bootcamp gives hands-on instruction from experienced instructors, teaching programming languages such as, JavaScript, HTML5, CSS and JSON.

Capstone Project:

Clique Safe is a web application that allows the user to find local outdoor events and utilize a map of the event once a selection is made. The user will then be able to track friends at the event and be alerted when a friend leaves the event or wants to meet up. I chose to start this project because there is safety in numbers, especially in recent years when outdoor events have not always been the safest. I find comfort in knowing that I can locate friends and they can locate me, in case of an emergency or just to hang out! I built this project utilizing HTML5, CSS, JSON, Node.js and JavaScript. I implemented a Maps JavaScript API and am making future plans to add a Geolocation API in order for the user to track their location.

Personal Projects/ Interests related to tech:
